## COLOSSAL CREATURE

## What is the largest living thing in the world?

For each exercise, circle the coordinate pair that is a solution to the equation. The letters next to the ten solutions will spell out the two-word answer to the question.

Tip: To determine if point $(x, y)$ is a solution to a linear equation (i.e., is part of the graph), plug the $x$-value into the equation and solve for $y$; if the $y$-values agree, the point is a solution. For example, point $(2,1)$ is not a solution to line $y=x+3$, because substituting 2 for $x$ in the equation yields $y=5$, not $y=1$.
