

# 9.4 Solve Polynomial Equations in Factored Form

**Goal** • Solve polynomial equations.

**Your Notes**

## VOCABULARY

\_\_\_\_\_

Roots

\_\_\_\_\_

Vertical motion model

## ZERO-PRODUCT PROPERTY

Let  $a$  and  $b$  be real numbers. If  $ab = 0$ , then  $\underline{\hspace{1cm}} = 0$   
or  $\underline{\hspace{1cm}} = 0$ .

### Example 1 Use the zero-product property

Solve  $(x - 5)(x + 4) = 0$ .

#### Solution

$$(x - 5)(x + 4) = 0$$

Write original equation.

$$\underline{\hspace{1cm}} = 0 \quad \text{or} \quad \underline{\hspace{1cm}} = 0$$

property

$$x = \underline{\hspace{1cm}} \quad \text{or} \quad x = \underline{\hspace{1cm}}$$

Solve for  $x$ .

The solutions of the equation are \_\_\_\_\_.

**CHECK** Substitute each solution into the original equation to check.

$$\begin{array}{l} (\underline{\hspace{1cm}} - 5)(\underline{\hspace{1cm}} + 4) \stackrel{?}{=} 0 \\ \underline{\hspace{1cm}} \stackrel{?}{=} 0 \\ \underline{\hspace{1cm}} = 0 \end{array} \quad \begin{array}{l} (\underline{\hspace{1cm}} - 5)(\underline{\hspace{1cm}} + 4) \stackrel{?}{=} 0 \\ \underline{\hspace{1cm}} \stackrel{?}{=} 0 \\ \underline{\hspace{1cm}} = 0 \end{array}$$

**Your Notes**

**Example 2** Find the greatest common monomial factor

Factor out the greatest common monomial factor.

a.  $16x + 40y$

b.  $6x^2 + 30x^3$

**Solution**

a. The GCF of 16 and 40 is \_\_\_\_\_. The variables  $x$  and  $y$  have \_\_\_\_\_. So, the greatest common monomial factor of the terms is \_\_\_\_\_.

$16x + 40y =$  \_\_\_\_\_

b. The GCF of 6 and 30 is \_\_\_\_\_. The GCF of  $x^2$  and  $x^3$  is \_\_\_\_\_. So, the greatest common monomial factor of the terms is \_\_\_\_\_.

$6x^2 + 30x^3 =$  \_\_\_\_\_

**Example 3** Solve an equation by factoring

Solve the equation.

a.  $3x^2 + 15x = 0$

Original equation

\_\_\_\_\_ = 0

Factor left side.

\_\_\_\_\_ = 0 or \_\_\_\_\_ = 0

Zero-product property

$x =$  \_\_\_\_\_ or  $x =$  \_\_\_\_\_

Solve for  $x$ .

The solutions of the equation are \_\_\_\_\_.

b.  $9b^2 = 24b$

Original equation

\_\_\_\_\_ = 0

Subtract \_\_\_\_\_ from each side.

\_\_\_\_\_ = 0

Factor left side.

\_\_\_\_\_ = 0 or \_\_\_\_\_ = 0

Zero-product property

$b =$  \_\_\_\_\_ or  $b =$  \_\_\_\_\_

Solve for  $b$ .

The solutions of the equation are \_\_\_\_\_.

To use the zero-product property, you must write the equation so that one side is 0. For this reason, \_\_\_\_\_ must be subtracted from each side of the equation.

## Your Notes

✓ **Checkpoint** Solve the equation.

1.  $(x + 6)(x - 3) = 0$

---

2.  $(x - 8)(x - 5) = 0$

✓ **Checkpoint** Factor out the greatest common monomial factor.

3.  $10x^2 - 24y^2$

---

4.  $3t^6 + 8t^4$

The vertical motion model takes into account the effect of gravity but ignores other, less significant, factors such as air resistance.

### VERTICAL MOTION MODEL

The height  $h$  (in feet) of a projectile can be modeled by

$$h = -16t^2 + vt + s$$

where  $t$  is the \_\_\_\_\_ (in seconds) the object has been in the air,  $v$  is the \_\_\_\_\_ (in feet per second), and  $s$  is the \_\_\_\_\_ (in feet).

**Your Notes**

**Example 4** Solve a multi-step problem

**Fountain** A fountain sprays water into the air with an initial vertical velocity of 20 feet per second. After how many seconds does it land on the ground?

**Solution**

**Step 1** Write a model for the water's height above ground.

$$h = -16t^2 + vt + s \quad \text{Vertical motion model}$$

$$h = -16t^2 + \underline{\quad}t + \underline{\quad} \quad v = \underline{\quad} \text{ and } s = \underline{\quad}$$

$$h = -16t^2 + \underline{\quad} \quad \text{Simplify.}$$

**Step 2** Substitute  $\underline{\quad}$  for  $h$ . When the water lands, its height above the ground is  $\underline{\quad}$  feet. Solve for  $t$ .

$$\underline{\quad} = -16t^2 + \underline{\quad} \quad \text{Substitute } \underline{\quad} \text{ for } h.$$

$$\underline{\quad} = \underline{\quad} \quad \text{Factor right side.}$$

$$\underline{\quad} \text{ or } \underline{\quad} \quad \text{Zero-product property}$$

$$\underline{\quad} \text{ or } \underline{\quad} \quad \text{Solve for } t.$$

The water lands on the ground  $\underline{\quad}$  seconds after it is sprayed.

The solution  $t = 0$  means that before the water is sprayed, its height above the ground is 0 feet.

**Checkpoint** Complete the following exercises.

5. Solve $d^2 - 7d = 0$ .	6. Solve $8b^2 = 2b$ .
---------------------------	------------------------

**7. What If?** In Example 4, suppose the initial vertical velocity is 18 feet per second. After how many seconds does the water land on the ground?

**Homework**
